## About This Game

Shooting enemies creates synth beats and **sound generated by your actions**. Master the unique 1-1 control mechanics to unlock the perfect build, all while racking up style points by laying down sweet bass lines.

Twin Synth is part **game**, part **groovebox**. It's part **twin-stick shooter**, part **synthesizer**.

Feel the beat in this action-packed & rhythmic twin-stick shooter where **two guns are better than one**. Use the unique **momentum-based movement** to synthesize a symphony of sound while you play or delve deep into the custom 'synth section' at any time to **craft your own soundtrack**.

The only game that let's you literally **create the soundtrack while you play** - no audio samples are used in the game at all (**all sounds are generated at runtime**) and so the player has full control over what they hear.

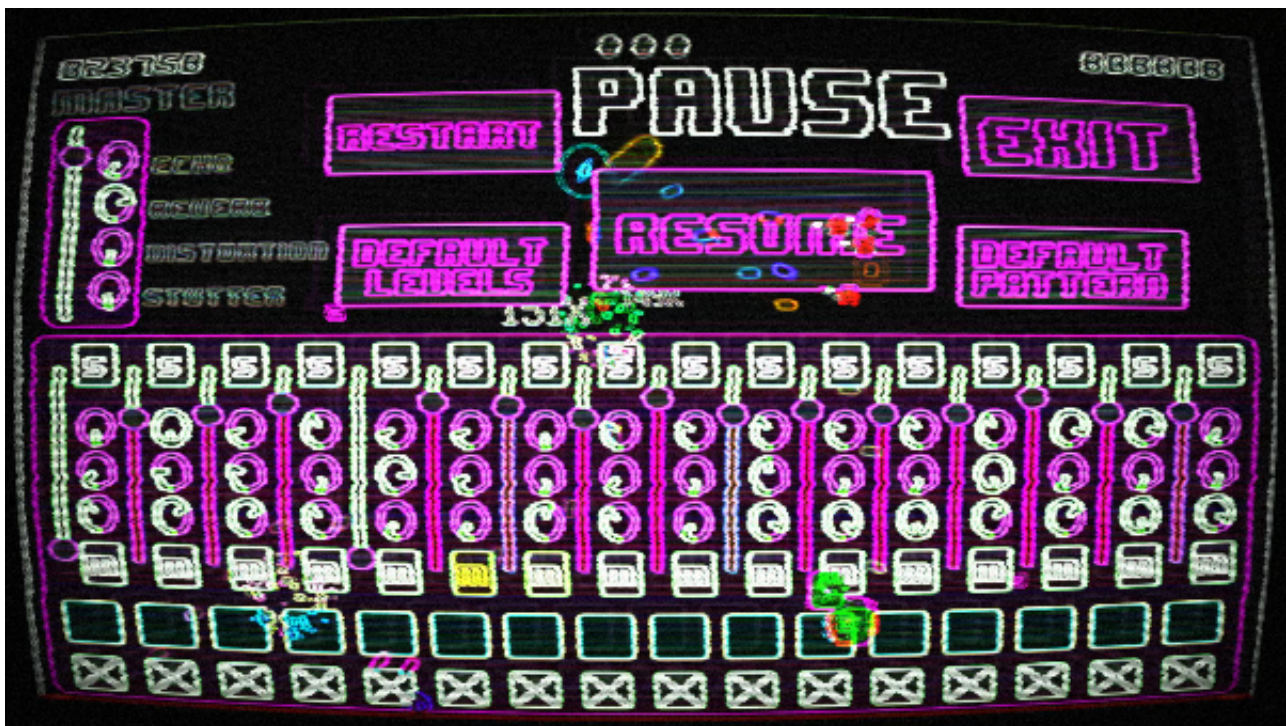

**SHOOT TO MOVE**

---

No thrusters, no engines, just Twin blasters. **Shooting pushes you in the opposite direction**, so shoot carefully! Shoot both guns at once for some high-level techniques.

## MASTER YOUR SOUND

A fully featured **16 channel mixer & synth control section** gives you complete control of the sound at any time. Actions made here are carried through into gameplay and vice-versa. This means you can tweak the synths to **make new unique sounds** or just grab a ready-to-go preset and **perform for your friends**.
